

Sophisticated Solutions.

Your guide to the 7000 Series digital keyset range.

Flexibility and Style.

Complex technology, simple operation.

The 7000 Series handsets bring a new dimension to the office by providing advanced communications with a contemporary design from one of the world's leading telecoms equipment manufacturers. Made from durable plastics, the 7000 Series handsets combine ergonomic design with simple operation which addresses the complete needs common in a business environment. Keysets include the 7004N, 7004D and 7008D, the choice for basic system services. The 7016D or 7024D for more advanced user needs incorporate innovative mobile like operating style with navigation and context sensitive keys. The 7024LD with its large display and feature keys is the choice for the power user.

Powerful and easy to use.

The 7000 Series handsets have been developed with the growing business in mind, ensuring that your investment is made in future proofed technology. The ipLDK Range of Key Telephone systems, with which the 7000 Series has been designed to work, is an IP enabled communications platform ranging to a maximum of 600 ports. Combining the power of the ipLDK systems with the contemporary design of the 7000 Series handsets enables all businesses to project a professional and efficient image.

Reliable Technology.

The 7000 Series handsets are compatible with all ipLDK communications systems and have been designed specifically to complement the system's features. With one of the industry's lowest failure rates and a full 12 month Warranty you can be sure of the quality and reliability of the 7000 Series handsets. Reliable handsets only have value when the system they work with conforms to the same high standards, so rest assured that the LG-Nortel ipLDK range of systems has been developed over years of experience and is built to exacting standards.

The DSS console is an additional unit which expands the capabilities of all the 7000 Series handsets by providing extra flexible buttons. This highly customisable unit allows 48 flexible buttons to be programmed as one-touch feature keys, direct station selection keys and direct line keys. You can also use the DSS console as a quick dial station by using the flexible buttons as speed dials to frequently dialled numbers such as suppliers, customers or colleagues.

Available in Black or White to match the main keyset, the DSS console features integrated two-colour LED's indicating the line or extension status – true at-a-glance performance.

DSS Console.

Wire-Free.

Bluetooth connectivity for wireless calls.

Bluetooth technology has become the standard for hands free mobile phone conversations with many drivers and busy professionals using Bluetooth headsets. This technology has now reached your desk, where its impact is likely to be just as important. The 24 Button Keypad has the option to connect a module which enables Bluetooth connectivity. This addition allows you to 'pair' a Bluetooth headset with the desk Keypad giving up to a 5 meter range of wire free conversation, and because the Bluetooth technology is standardised you do not need a different headset than the one used with your mobile phone.

Colour coded to the Keypad, the Bluetooth module fits into the port on the underside of the Keypad, reducing desk clutter and optimising space whilst allowing employees to handle simultaneous conversation and keyboard entry or move about the office.

Caller ID Display

With the ipLDK you always know who is calling with Caller ID Display right on your desk, when using a 16 or 24 Button handset. This feature extends to Single Line Telephones such as non-system DECT with displays* with the addition of a system board. This enables you to answer incoming calls professionally with the customers name when integrated into a CTI environment.

*ipLDK20 only.

Key Benefits.

Yield more power with the 7000 Series.

■ *Save Time*

Menu driven soft keys allow you to save time whilst on a call. The soft key functions will change depending upon call status.

■ *Intuitive Display*

Crystal clear LCD allows display phones to be your window to the system. Call information is clear and user programming is quicker and easier with an LCD display.

■ *Freedom to Roam*

Users of the 24 button handsets can benefit from wireless communications with an optional Bluetooth module for their phone. The Bluetooth module allows connection of a standard Bluetooth headset to the phone.

■ *Improved Efficiency*

An optional USB module for the 24 button handsets allows users to combine the familiar setting of their PC Desktop with the handsets for one-click call recording.

■ *Designed for Comfort*

Users of the 8 button phone and above can utilise a built-in headset port for convenience and comfort. Headsets that have a standard 2.5mm jack connection can be connected directly to the 7000 series handsets.

The Range

- ◆ 2 Fixed Function Keys
- ◆ Message Lamp
- ◆ On-hook Dial
- ◆ Dedicated Feature Keys

4 Button Non-Display

7004 ND

- ◆ Single Line Display
- ◆ Message Lamp
- ◆ On-hook Dial
- ◆ Dedicated Feature Keys

4 Button Display

7004 D

- ◆ Two Line Display
- ◆ Message Lamp
- ◆ Handsfree
- ◆ Headset Port
